Data science is the research, analisys, testing and prediction of data.

# What Is Data Science

**1**

## Problem

Data Scientists are give a problem and need to find a solution of present a set of data and predictions

**2**

## Research

The data scientist researches the problem to find the best solutions.
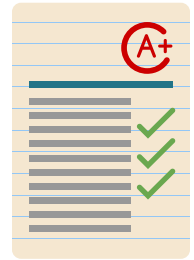

**3**

## Analyzing Data

After finding data the scientist has to clean the data. Make sure there are no problems.

**4**

## Predictions and Testing

The data scientist test the data and creates predictions base off of that. Changes the data if there are problums

**5**

## Presentation

After everything the data scientist will compile there research in to a document to present to the audience.
